JLG Telehandler

JLG Telehandler Training Saskatchewan - In the late 1960's John L. Grove, with his wife Cora embarked on on a cross country voyage in their RV. Freshly retired, after spending many years working with his brother to build their crane company into an industry leader, John had no idea that momentous trip would permit JLG Industries, Inc to emerge. The world leader of mobile aerial work platforms and precision materials handling equipment was the end consequence of a road trip.

While on their journey, John spent time talking to previous business contacts whom the Groves stopped to see along the way. These conversations combined with a tragic occurrence-two workers being electrocuted on scaffolding when the Groves were traveling to the Hoover Dam- John discovered a vast marketplace for a product that could quickly and securely lift people in the air to accomplish maintenance and other construction functions.

After their return from holiday, John set up a partnership with two of his friends and obtained a metal fabricating company in McConnellsburg, Pennsylvania. Starting with a small crew of twenty staff, they fashioned and sold their first JLG aerial work platform in 1970. The business incorporates some of the basic design elements of that original lift into existing versions.

JLG lift trucks have come a ways from the time when Mr. John L. Grove returned to town from his cross-country road trip and since the first aerial work platform debuted on the market. At present, the company proudly continues to expand itself into a range of markets globally and develops new products to make certain clients are capable of being more efficient and perform in the workplace within a safer atmosphere.
