

## Saskatchewan Scissor Lift Operator Certification

Saskatchewan Scissor Lift Operator Certification - North American regulators suggest that workplaces require operators of scissor lifts, booms or aerial work platforms to obtain certification training. Scissor lift operator certification is not mandatory, but there are advantages to making sure that this particular training is offered to all operators.

To enable personnel to reach high levels, the scissor lift is a work platform designed with a pantograph, that is a linked, folding support that shaped in an 'X' pattern. Upward movement occurs when pressure is applied to the outside of the lowest set of supports, propelling the work platform vertically by elongating the 'X' pattern. A bridge extends from some platforms in order to allow convenient access to the work area.

The platform returns to the ground by release of a manual valve. The platform descends through simple release of pneumatic or hydraulic pressure. This is the key reason that scissor lifts are the best machinery at worksites.

Operators that are both inexperienced or experienced would be able to get some benefit from proper scissor lift training. A scissor lift operator certification program could be specifically designed to accommodate for those lifts utilized at your workplace. The trainees' certificate of training will list the models on which they trained.

Included in the classroom instruction are the following topics: rules and guidelines, authorization and attitude; introduction to scissor lift training; Occupational Health safety; safety rules and common dangers; workbook and record of training (ROT)

The in-class session will end with a written exam.

The following areas practical hands-on training and instruction covers: pre-operational check; safety equipment;; function test checklist; operators guidebook; regular maintenance and the practical session will end with a demonstration of proficiency.
